

USAFact Supplies Background Screening With New IDChecker Product

Riverside, CA based company, USAFact, has announced another new [background screening](#) product release within their RapidFACT ordering platform. "IDChecker" is the newest tool to be added to the new RapidFACT suite of employer solutions. USAFact's various platforms are known for providing screening services for a variety of employers, banking institutions, and property managers.

With nearly 40 years of experience in employee screening, drug testing, tenant screening, and more, USAFact is recognized for their best-in-class service delivery. The new product is yet another method the company uses to keep themselves positioned at the top of their industry. The identification verification process has changed drastically over the last decade, with new technology presenting itself almost daily. IDChecker works by scanning identification cards or passports and uploading the collected data for meticulous identity verification and facial recognition comparison, allowing employers to avoid taking on this requirement manually, themselves. The product is marketed for use within the Human Resources field, and works well for recruiting agents and other professionals acting within the hiring process. As stated by Senior Vice President of Business Operations, Cheryl Franklin, "With the growing preference to utilize mobile devices in all aspects of business, IDChecker is another product USAFact brings to the table in our commitment to deliver solutions that allow employers to maximize efficiency."

USAFact champions this method of identity verification as a critical method that brings an end to blurry, scanned, or faxed images that may be shared in unprotected manners in violation of Homeland Security's strict requirements for the sharing, exchange, and validation of Personal Identity Information (P.I.I.). The process also helps reduce tedious amounts of typing, while encouraging a higher volume of satisfied clients. USAFact has suggested that with so many businesses and individuals using mobile devices, limiting the need for keystrokes can greatly improve the efficiency of the hiring process. For this reason, workflow options within the IDChecker process allow for an advanced auto capture tool, capable of quickly and easily snapping a photo of each document required with sharp, clear results.
