Identity Intelligence to Empower Background Screening Organizations

Have you ever run a national criminal database search on behalf of your client, only to find yourself sifting through and confirming a long list of potential offenses your client isn't even concerned with? Instead of wasting time on traffic infractions or minor drug convictions that may not be relevant, utilizing a solution that includes filtering options along with detailed records can help cut down on processing time and increase profitability.

idiCRIM, the leading comprehensive database of national criminal history records, allows you to **filter potential criminal records by offense type and disposition**. Any infraction that is not of interest to your client can simply be omitted from your search results.

Paired with **idiTRACE**, the industry's most advanced SSN trace solution enabling background screening organizations to uncover address and alias histories through customized search parameters and filters, you will be equipped with a comprehensive screening support solution.

If you have any questions or would like to schedule a demo, please email AJ Holloway, Solution Director of Background Screening at IDI. Alternatively, if you'd like to connect at the upcoming PBSA conference, please choose a time on our team Calendly link here or stop by booth 122.

We look forward to hearing from you soon.

P.S. Ask us about our Accio Data integration!
